

# CL13 SERIES DESCRIPTION

## Rigid Coupling

The CL13 Series is a lightweight, extremely low inertia miniature rigid coupling. It delivers high response to optimize motor performance and is available in either aluminum alloy or stainless steel construction, both of which provide high strength and low wear rates for long service lives.

- Setscrew type and clamp type models available
- Engineered with strong, durable materials
- Simple, low maintenance design
- Cost effective servo motor couplings
- Inch, metric and mixed bores
- Custom design and fabrication available

Aluminum

Stainless Steel

### Options

- Aluminum 6061
- Stainless Steel 303
- Setscrew
- Clamp
