

CL6 SERIES DESCRIPTION

Bellows Coupling

Candy's CL6 is a zero-backlash, flexible shaft Bellows coupling designed with performance characteristics required by a number of motion control applications. Its spring action Bellows configuration absorbs parallel and angular misalignments and shaft end play, while being torsionally stiff enough to provide excellent response.

- Low inertia, high response motion control couplings
- Identical clockwise and counterclockwise rotational characteristics
- High torque capacity and excellent response
- Spring action Bellows absorbs misalignment

Setscrew Type

Clamp Type

Options

- Aluminum 6061 Hubs
- Stainless Steel Bellows
- Setscrew
- Keyway and Setscrew
- Clamp
